The Atomic Cosmos

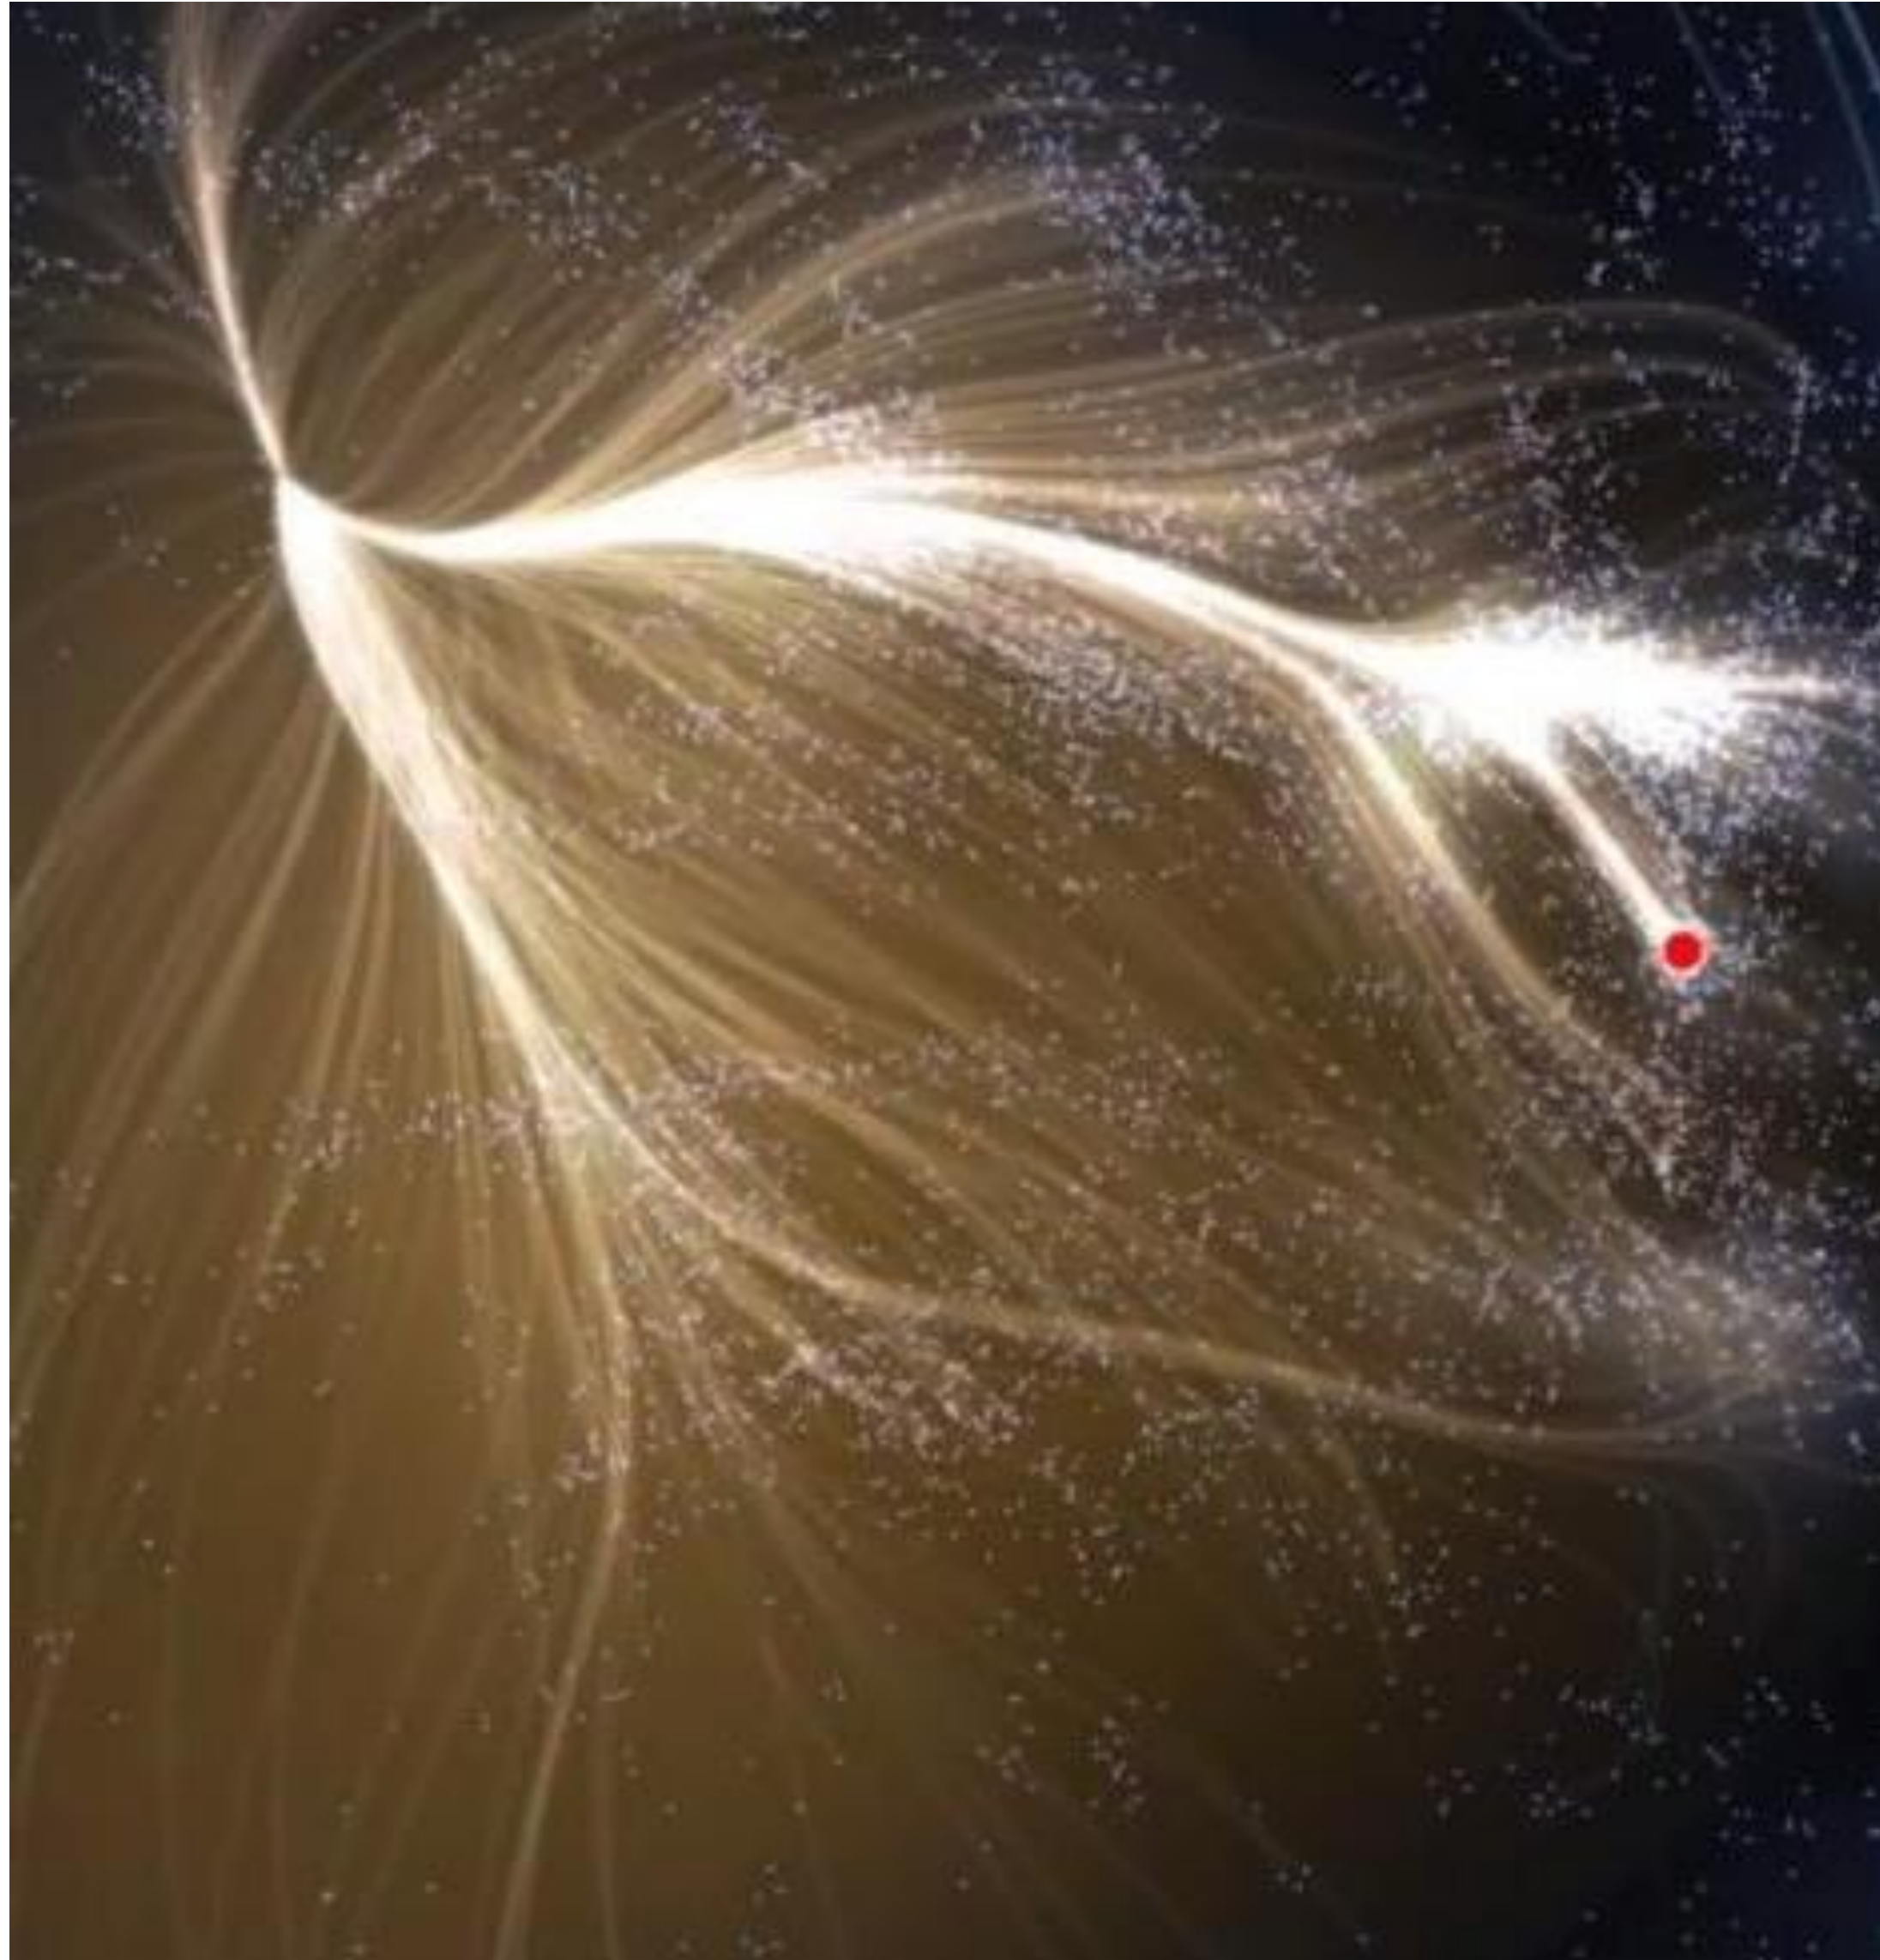

- Zero for the atom is the unmanifest, or implicate order.
- According to string theory, manifestation arises like tiny vibrating strings (6).
- These vibrating strings form quarks (5) and electrons (4).
- The quarks form protons and neutrons, which in turn form the atoms' nucleus (3).
- Fully formed atoms create molecular structures and compounds (2).
- These in turn give rise to all matter (1), which is infinity for the atom.

The Human Cosmos

The Megalocosmos

- Laniakea, “immeasurable heaven”, refers to our galactic cluster, the largest perceptible entity in the cosmos. The red dot in the image represents the approximate location of our Milky Way galaxy.
- Recent research reveals a number of striking analogies between the structure and makeup of galactic clusters and the neural network of the human brain. More in common with one another than with their parts.
- This structure is also moving towards an unknown entity referred to as the Great Attractor.
